EXPERIENCE

ByteDance

Software Engineer (SRE)

Singapore

Jul 2026 - Present

- Build distributed storage tooling (HBase, ByteKV, TokaDB) for storage expansion from utilization alerts, machine replacement, configuration management, infrastructure tracking, and admin CLI usability.
- Investigate partition and replica-group issues with Grafana, shell tools, jump servers, and Go/Python code, drawing on Raft and RocksDB concepts.

Tangled Social

Co-founder & Software Engineer

July 2025 - Present

- Co-founded a live App Store social platform with 2,000+ users and built the majority of the codebase.
- Built real-time chat with AWS WebSocket Gateway, Lambda, and DynamoDB; provisioned infrastructure with Terraform and implemented monitoring and reliability features.

ByteDance

Software Engineer (SRE) Intern

Singapore

Sep 2025 - Dec 2025

- Monitored ByteGraph through on-call responsibilities and machine operations for production clusters in Singapore and Europe.
- Built warning-indicator exports with automatically calculated storage, read, and QPS quotas for system stability.
- Built a Cloud Platform dashboard tracking machine counts across models, cluster namespaces, and DCs to support faster provisioning and migration.

Taiwan Semiconductor Manufacturing Company (TSMC)

Software Engineer (DevOps) Intern

Taiwan, Hsinchu

June 2025 - Aug 2025

- Integrated OpenTelemetry tracing with Spring Boot Starter across 10+ fabrication labs; first on the team to enable context propagation for NATS-driven systems.
- Auto-generated test scenarios with Grafana Tempo to expand and track SIT coverage, eliminating manual system testing and saving developer time.
- Built auto sanity checks with Prometheus metrics to strengthen service reliability and deployment confidence across all fabrication labs.

Changi Airport Group

Software Engineer Intern

Singapore

Jan 2025 - May 2025

- Built a production event-driven serverless Slack bot to automate and mobile-enable flight operations workflows, reducing average query resolution time by 80%.
- Centralized CloudWatch log extraction across AWS accounts, parallelising export jobs to overcome the 10k log export limit.
- Built and deployed two internal production microservices that read flight data from the production database for airport operations.

Reluvate Technologies

Software Engineer Intern

Singapore

Feb 2022 - Jul 2022

- Built core Django merchant admin portal backend features with rigorous unit testing, ensuring scalability for 4,000+ merchants including KOI, Watsons, and Zara.
- Developed a company-wide testing SOP and served as the go-to person for Django unit-testing questions.

PROJECTS

PlantPulse | Dell Cloud and IoT Project Award Finalist | GitHub

- Designed cloud infrastructure for an IoT Plant Monitoring Device to detect disease rates, humidity, moisture, and temperature.
- Used AWS CDK for IoT Core, Lambda, DynamoDB, EventBridge, SNS, SES, S3, and SageMaker Batch Transform infrastructure.

ROOTech - Student Government

- Independently built event webpages serving 1,600 students: Orientation 2023, Night Fiesta 2023, and LCC 2024.
- Led custom RFID band integration and built a Django Game Booth Carnival System with real-time leaderboard, JWT authentication, and role-based API access controls.
- Built an AI chatbot with event pass generation for Open House 2025 registration, serving 1.8k users over 2 days.

EDUCATION

Singapore University Of Technology And Design (SUTD)

Bachelor's, Computer Science and Design

Singapore

Aug 2022 - May 2026

TECHNICAL SKILLS

Languages: Python, Golang, Ruby, Javascript, TypeScript, Java, HTML/CSS, SQL

Frameworks: Django, Flask, FastAPI, Ruby on Rails, Spring Boot, NextJS, ReactJS, React Native/Expo

Developer Tools: AWS, GCP, Azure Cloud, Kubernetes, Helm, Terraform, Sentry, Cypress, Grafana, Github Actions
